COLORS:   

X-Flare signal discs are a set of six rechargeable light markers in a solid rubberized housing. The emitted light is visible from up to 500 m during the day and up to 1000 m at night, helping to mark work zones, obstacles, failure sites and road sections requiring warning for drivers, technical services or rescue teams. The discs have an IP67 protection rating, withstand drops from 5 m and crushing, and they also float on water. Users can choose from 6 light modes and 3 colors. X-Flare markers feature automatic activation and synchronization — simply remove them from the case and place them at the scene, without switching on or setting the mode on each disc separately. The discs are equipped with strong magnets for mounting on metal surfaces. The set is carried in a transport case that also works as a charging station.
