Hussar GL is an advanced tactical flashlight designed for handguns, combining an intense white light output with a maximum output of 900 lumens and a green laser visible up to 500 meters. Equipped with the Swift Mount System (SMS), this flashlight allows for rapid attachment and detachment, crucial in situations requiring immediate action. The Dual Source System (DSS) enables power from either CR123A batteries or 16340 rechargeable batteries with a capacity of 850 mAh, ensuring extended operational time. The “Momentary Switch” function allows the flashlight to be activated temporarily, which is crucial for tactical operations. Compatible with popular handgun models, Hussar GL also fits holsters from leading manufacturers, making it an ideal choice for law enforcement, special forces, and civilian users. The package includes two CR123A batteries, a hex key for laser adjustment (horizontal and vertical), and a screwdriver for mounting screw adjustments.
